AWARDS WINNER

IBOX — Smart Locker Technology Made in Morocco

IBOX is a Moroccan technology company developing intelligent locker solutions that are transforming the way goods are delivered, collected, stored and managed.

At the heart of IBOX is a simple but powerful idea: make the last mile of delivery more secure, flexible and efficient through automation. IBOX combines smart locker hardware, secure authentication and centralized software management to create a complete ecosystem for automated delivery and storage.

The solution enables individuals and organizations to securely deposit and retrieve parcels, online purchases, medicines, food, luggage and other goods through intelligent compartments available 24/7. Users can access their designated locker through secure authentication methods such as QR codes and access codes, while operators benefit from real-time monitoring, traceability and centralized management.

Beyond the locker itself, IBOX has developed an integrated management platform that enables organizations to oversee their installations, users, operations and activity from a central interface. This combination of hardware, software and automation provides the flexibility required for different environments and business models.

IBOX solutions can be adapted to a wide range of applications, including e-commerce and last-mile delivery, residential communities, businesses, healthcare, education, hospitality, luggage storage and other environments where secure and automated access to goods is required.

Designed and developed in Morocco, IBOX reflects the growing potential of Moroccan technology and innovation to address global challenges. By combining local engineering with a scalable technology approach, the company aims to contribute to the development of smarter logistics infrastructure while creating solutions that can be deployed across different markets.

IBOX's vision is to become a leading smart locker technology provider, helping businesses and communities build more connected, secure and efficient delivery and storage ecosystems.
